

Cattle Plague Committee.—At the weekly meeting, on Saturday, Mr. Garner, veterinary surgeon inspector, reported that pleuro-pneumonia existed on the farm premises of Mr. J. L. Ekins, at Woodhurst, and the committee declared the same an infected place. He also reported that he had found some cattle in St. Ives market, belonging to Mr. John Wardle, of Derby, affected with foot and mouth disease, and that he had them removed to a grass field near the town. The committee ordered the case to be laid before the St. Ives Bench, that such steps might be taken as might be deemed proper. A number of regulations were made as to inspection by the police, which are printed and circulated.
